Is a 10kW Solar System better than an on-grid Solar System?

While the 10kW off-grid solar system price may be higher, it provides reliability and the ability to store surplus energy. However, the on-grid option offers independence, especially in remote areas by providing a reliable connection to the main electricity grid. For more solar content, keep reading our blog posts.

How much money can a 10kW solar system save?

In most cases, the amount of money you can save with a 10kW solar system is actually limited by the amount of money you're already spending on your monthly energy bill. If you live in an area where solar savings go the furthest, going solar could save you hundreds of dollars in utility bills every month.

What is a 10kW solar energy system?

A 10kW solar energy system can provide all the electricity the average home needs and probably more. In other words: The excess energy produced by your solar panels can be sent back to the grid, allowing you to make money from it. If you're connected to the power grid, a 10kW solar panel array can functionally offset all of your utility energy use.

How much electricity does a 10 kW solar system produce?

Generally, the average 10 kW solar system produces around 10,000 watts under ideal conditions, or roughly 30 and 45 kWh, daily. Ultimately, the amount of electricity that a solar energy system can produce will depend on several factors, including the quality of the parts used in the system and the angle and orientation of the solar panel array.

Can a 10kW solar system offset energy use?

If you're connected to the power grid, a 10kW solar panel array can functionally offset all of your utility energy use. We say "functionally" because, while a 10kW system likely produces more energy than your home uses, only part of your energy consumption takes place during the day while your panels are producing power.
