

Lithium iron phosphate battery The lithium iron phosphate battery (LiFePO₄ or LFP) is the safest of the mainstream lithium battery types. A single LFP cell has a nominal voltage of 3.2V. A 51.2V LFP battery consists of 16 cells connected in series. LFP is the chemistry of choice for very demanding applications. Some of its features are:

When charging a fully depleted 87 kWh battery with a 240-volt charging dock, the 2023 Ariya can be fully charged in about 9-10 hours.. The charging time can be estimated by dividing the battery capacity (87 kWh) by the charging rate (in this case, 240 volts). To calculate the approximate charging time, we also need to consider the charging efficiency and any ...

This rating tells you how much electricity can be stored in the battery pack. It's a unit of energy, just like calories, and one kWh is equal to 3600 kilojoules (or 3.6 megajoules). Unlike kW it is not a unit of power. Lower-powered EVs require a smaller capacity; for example the Nissan Leaf stores 40kWh and the Hyundai Kona Electric 64 kWh.
