The authors evaluate the relationship among energy and sustainability, the renewable potential existing in Venezuela, as well as some new data and key insights regarding its energy framework. Special reference is made to infrastructure energy projects in Venezuela.

The most important types of renewable energy technologies in Venezuela are: hydropower; wind; solar; biomass; and; green hydrogen. In this context, the Renewable and Alternative Energy Bill (RAE Bill) considers these sources as renewable energy resources.

Manufacturer of wind turbine blades intended to serve the renewable energy sector. The company aims to provide wind turbine blades to markets domestically and internationally to environmentally protect the world.

Venezuela's Cardon and Amuay refineries are part of the Paraguana Refining Center, which is one of the world's largest but has been operating at a fraction of capacity for the last decade because of lack of maintenance.

Yet China's domestic renewable energy potential far exceeds current or future demand, offering a path to less

reliance on those imports. ... CHINA - MARCH 02: Aerial view of wind turbine ...
