

Afghanistan is one of the most sun-rich countries in the world, benefitting from about 300 sunny days annually. Its renewable energy potential is staggering, estimated at over 300,000 MW, with solar energy comprising a significant majority.

Kandahar's 15 MW solar power project is currently one of the biggest national projects in Afghanistan. This project has been developed as IPP by Zularistan Ltd and selling power to the Government/DABS under a PPA contract for 20 years period.

Topography for solar PV around Kabul, Afghanistan. The topography around Kabul, Afghanistan is generally mountainous, with some flat areas in the valley. The areas most suited to large-scale solar PV installations would be those that have a clear view of the sun and are relatively flat.

Afghanistan has a high solar radiation level, and its use of solar power is steadily increasing. The country has a landlocked location and a population of fewer than 35 million, making it one of the lowest energy-consuming countries globally.

In response, the UNDP has launched solarization initiatives aiming to tackle Afghanistan's energy challenges through the implementation of solar power. The initiative focuses on targeted regions and communities, aiming to provide sustainable energy access and ...

According to UNDP, solarization initiative is a crucial step towards addressing Afghanistan's energy challenges. Meanwhile, officials from some governmental hospitals and clinics say that the lack of electricity in health centers threatens the lives of patients.

The construction of solar power plants in Afghanistan started in Kandahar in 2014, and now there are only five active solar power plants in the country with a capacity of 68,184 megawatts of electricity per hour.
