With its own power plant portfolio and a decade and a half of market presence, ALTEO Nyrt. is a dominant factor in the Hungarian energy sector. The Group considers the dissemination of high-efficiency decentralized and renewables-based electricity production in Hungary to be its priority.

Our solar power plants in Monor commenced commercial operation in December 2018. The facility, consisting of a total of 17,072 pieces of 285 W polycrystalline solar cells with a nominal capacity of 4 MW, is our first self-implemented solar farm, which consists of eight solar power plant units of 499 KW each.

As one of the country's leading companies with unrivalled professional expertise and technical background in commercial services for power plants, we know exactly and follow what our partners need - whether for a renewable energy group or an agricultural business with solar power plants on its premises.
