

What is an aluminum profile bracket?

An aluminum profile bracket is a kind of hardware for connecting intersecting components. It is commonly used in decoration engineering and furniture assembly. Aluminum profile brackets have better heat shrinkage, hardness, and other properties compared to other materials. Their stability is also superior to other materials.

Does aluminum alloy need aging heat treatment for solar photovoltaic brackets?

The commonly used aluminum alloy series for solar photovoltaic brackets need to undergo aging heat treatment to achieve the required strength. China Aluminum strictly controls the solution treatment and aging heat treatment process to ensure the required strength of the aluminum alloy brackets.

Is aluminum a good material for solar panels?

With its advantages of light weight, high strength, corrosion resistance and durability, aluminum is widely used in building solar panel frames and photovoltaic supports. Research shows that aluminum is the most widely used material in solar photovoltaic (PV) applications, accounting for more than 85% of most solar PV modules.

What types of solar panels does Chalco stock?

Chalco stock various aluminum extruded solar panel frames and photovoltaic support aluminum alloys, with a variety of finishes to choose from. If the existing products are not suitable for your needs, we can also customize them according to customer requirements.

Why are solar panels made of aluminum?

And because of its good conductivity, aluminum has gradually replaced silver, copper and stainless steel in the position of solar panels. Quick Quote Solar cell chips, typically silicon-based, are mainly linked using aluminum.

Does Chalco provide anodized aluminum profiles?

Chalco provides anodized aluminum profiles to further enhance the corrosion resistance of solar aluminum alloy frames. After the production of aluminum profiles, we will provide strict product quality inspection and precise product film pasting, packaging and transportation.
