

How much does electricity cost in Samoa?

Average U.S. and American Samoa Electricity Prices (2022) ASPA rates are down slightly as of January 2024--approximately \$0.41/kWh for residential and commercial customers and \$0.38/kWh for industrial customers. ASPA's total energy rates include a renewable energy flat rate charged at \$0.002/kWh across all service types (ASPA 2024).

Where does American Samoa get fuel?

Fuel for American Samoa comes from Singapore with Busan, South Korea as an alternate provider if needed. In the case of fuel disruption, Pacific Energy prioritizes serving ASPA to ensure power and water treatment services are not interrupted (Pacific Energy representative, personal communication, August 9, 2023).

Is American Samoa a renewable country?

American Samoa's energy sector relies almost entirely on imported fossil fuels, although renewables represent a small but growing power system contribution. The territory possesses substantial solar energy resources, as well as wind and biomass resource potential.

How much solar power does American Samoa have?

Of the 5 MW of ASPA's grid-connected solar PV capacity, 4.1 MW is utility scale and 900 kW is distributed across rooftops. American Samoa's smaller islands are moving toward a combination of solar, batteries, and diesel generators.

Does Samoa have an emergency energy conservation plan?

1979: The U.S. "Emergency Energy Conservation Act of 1979" requires the submission of an emergency energy conservation plan by each state or territory (Public Law 96-102, as amended). American Samoa adopted its Emergency Energy Conservation Plan in 1982 (see Chapter 5, Annex A of ASCA 12 for plan details).

Does American Samoa have a geothermal energy plan?

The 2016 American Samoa Energy Action Plan identifies some geothermal resources, but none of these are viable for commercial electricity generation. The 2016 plan instead emphasizes the development of wind and solar power (Ness, Haase, and Conrad 2016). American Samoa is exploring opportunities for both offshore and onshore wind power generation.

A 1.4-megawatt solar array is more than enough to meet the islanders' energy requirements and 60 Tesla Powerpacks amounting to 6-megawatt hour store enough energy to power the island for up to...

In 2022, the average electricity price for residential customers in American Samoa was approximately 45 cents/kilowatt-hour (kWh) - almost three times the U.S. average of 15 cents/kWh. Renewable energy

represents a small but growing power system contribution, although American Samoa relies almost entirely on imported fossil fuels.

The island of Ta'u in American Samoa once relied on diesel fuel to supply electricity. Residents experienced consistent power rationing and outages, and key services like hospitals and schools hinged on infrequent fuel imports.[1]

The island of Ta'u in American Samoa, located more than 4,000 miles from the West Coast of the United States, now hosts a solar power and battery storage-enabled microgrid that can supply nearly 100 percent of the island's power needs from renewable energy.

Now, the island's electricity is almost entirely provided by the sun, with the installation by SolarCity of 5,328 solar PV panels, totaling 1.4 megawatts. Solar power from the panels is also being stored by 60 Tesla ...

\$70,715 grant to help American Samoa's Ta'u island operate on 100% renewable energy. This grant helps fund the replacement of a smaller diesel-powered emergency backup generator. The entire system includes solar photovoltaic panels and battery storage. What is this project? EPA's Pacific Southwest Region provided a grant to the

The island of Ta'u in the U.S. territory of American Samoa relied heavily on diesel generation to meet its electricity needs until a solar+storage microgrid was installed in 2016. Now, instead of burning through 300

gallons of imported diesel fuel every day, the island's homes and businesses are almost entirely powered by solar+storage.
