What is the global market for lithium-ion batteries?

The global market for Lithium-ion batteries is expanding rapidly. We take a closer look at new value chain solutions that can help meet the growing demand.

What is the future of lithium batteries?

The elimination of critical minerals (such as cobalt and nickel) from lithium batteries, and new processes that decrease the cost of battery materials such as cathodes, anodes, and electrolytes, are key enablers of future growth in the materials-processing industry.

Should lithium-based batteries be a domestic supply chain?

Establishing a domestic supply chain for lithium-based batteries requires a national commitment to both solving breakthrough scientific challenges for new materials and developing a manufacturing base that meets the demands of the growing electric vehicle (EV) and electrical grid storage markets.

Are lithium ion batteries more cost competitive?

The authors propose that both batteries exhibit enhanced energy density in comparison to Li-ion batteries and may also possess a greater potential for cost competitiveness relative to Li-ion batteries.

Why are lithium-ion batteries so popular?

Lithium-ion batteries are pervasive in our society. Current and projected demand is dominated by electric vehicles (EVs), but lithium-ion batteries also are ubiquitous in consumer electronics, critical defense applications, and in stationary storage for the electric grid.

What is the National Blueprint for lithium batteries?

This National Blueprint for Lithium Batteries, developed by the Federal Consortium for Advanced Batteries, will help guide investments to develop a domestic lithium-battery manufacturing value chain that creates equitable clean-energy manufacturing jobs in America while helping to mitigate climate change impacts.
