

Anguilla Electricity Company, LTD (ANGLEC) recently completed construction of its 1 megawatt (MW) solar plant which was integrated into ANGLEC's power grid - after a series of tests - on May 21st, 2015.

The solar PV plant is CDB's sixth intervention in the energy sector in Anguilla, and supports the Government of Anguilla's goal of transforming the country into a low carbon economy. The country has set a national target of producing 30 percent of its electricity from renewable sources by 2030 and cutting greenhouse gas emissions.

The green scrub has been removed and replaced with blue and silver solar panels. This is the location where the Anguilla Electricity Company Ltd (ANGLEC) took its first step into the arena of renewable energy by constructing a ...

Solar energy generation presents an opportunity to achieve Anguilla's energy goals, lower the cost of electricity, reduce its carbon footprint and reduce its annual dependence on about 20,400,000 liters of imported diesel fuel for electricity alone.

Currently there is no utility-scale renewable energy generation in Anguilla. Distributed generation technologies, such as solar photovoltaics (PV) and solar water heaters, have seen little uptake. Of the few distributed solar PV installations, most residential and commercial customers use them for

Annual generation per unit of installed PV capacity (MWh/kWp) 8.5 tC/ha/yr Solar PV: Solar resource potential has been divided into seven classes, each representing a range of annual PV output per unit of capacity (kWh/kWp/yr). The bar chart shows the proportion of a ...

On Thursday July 16, the Caribbean Development Bank" (CDB) Board of Directors approved a USD2.341 million loan to finance the installation and commissioning of a 1 Megawatt Solar Photovoltaic Plant at Corito, which will enable the Anguilla Electricity Company Limited (ANGLEC) to introduce renewable energy into the energy mix for electricity ...

Anguilla U.S. Department of Energy Energy Snapshot Population Size 17,422 Total Area Size 91 Sq. Kilometers Total GDP \$280.93 Million Gross Domestic Product (GDP) Per Capita \$12,200 Share of GDP Spent on Total Imports 28% Fuel Imports 4% Urban Population Percentage 100% Population and Economy Installed Capacity 26 MW RE Installed Capacity Share 8%

Anguilla's vulnerability to the effects of global climate change is disproportionately high when compared to the country's very small contribution to generating greenhouse gases (GHGs) through consumption of fossil fuels. To some extent, Anguilla has the opportunity to address these challenges by implementing

ANGLEC should procure a solar generation unit. ANGLEC should move forward with its plans to procure a solar PV installation of 1MW. This can be expected to supply 4,028,000 kWh per year--nearly 5 percent of ANGLEC"s total electricity sales--through conversion of sunlight into electricity via silicon panels.
