

What is Argentina's energy regulatory framework?

Argentina's energy regulatory framework seeks to provide greater market certainty to boost oil and gas production as the government sees the energy sector as a major driver of economic growth.

Why are oil and natural gas production rising in Argentina?

Crude oil and natural gas production in Argentina are both nearing record highs, driven by increasing output from the Vaca Muerta shale formation, which is offsetting declining output from conventional oil and natural gas fields.

How will Argentina regain energy self-sufficiency?

Get ahead with daily markets updates. In its urgent effort to regain energy self-sufficiency, Argentina wants more investment in its huge Patagonian shale deposits and its plentiful renewable sources such as wind and sun. It also has high hopes for its nuclear power industry.

Could a gas-prone deep offshore reopen a new chapter in Argentina's hydrocarbon industry?

The gas-prone deep offshore would open a new chapter in Argentina's century-old hydrocarbons industry, one that proponents say would be more efficient and less carbon-intensive, at the production stage, compared with the country's mature onshore and shallow-water operations.

Should Argentina's Drillers rally around a liquefied natural gas project?

YPF has been developing a liquefied natural gas project of its own involving multiple FLNGs and, eventually, construction of an onshore plant. Even with various projects being analyzed, YPF's chief executive has said that Argentina's drillers should rally around one venture.

How much natural gas is produced in Argentina?

An average of 5.0 billion cubic feet per day (Bcf/d) of natural gas was produced in Argentina over the first nine months of 2024, 5.2% more than the same period in 2023. In August, natural gas production averaged 5.4 Bcf/d, the most of any month in 21 years.
