# **SOLAR** PRO. Aruba mechanical storage of energy

#### Where does Aruba get its electricity from?

Aruba currently gets 15.4% of its electricity from renewable sources. The island has sufficient renewable energy resource potential, with excellent technical potential for ocean, wind, and solar renewable energy generation.

### What is the cost of electricity in Aruba?

The energy landscape of Aruba, an autonomous member of the Kingdom of the Netherlands located off the coast of Venezuela, is outlined in this profile. Aruba's utility rates are approximately \$0.28 per kilowatt-hour  $(kWh)^*(below the Caribbean regional average of $0.33/kWh)$ .

#### How much energy does Aruba consume annually?

Aruba has an annual consumption of 990 gigawatt-hours (GWh). Currently, about 13% of its generation comes from a 30-MW wind project and 0.9% comes from waste-to-energy (WTE) biogas. An additional renewable capacity of 34 MW is planned or in progress. Aruba's installed generation capacity is 230 megawatts (MW) with an average load of 100 MW.

## Does Aruba use ice for building cooling?

Aruba's utility installed a pilot ice storage cooling systemthat makes ice at night when electricity costs are lower. Ice is then used the following day to cool buildings instead of traditional air conditioning. Currently, Aruba gets 15.4% of its electricity from renewable sources.

## How many MW will Aruba's biogas plant use?

Aruba's biogas plant is hoping to add 3 MW to 6 MWof capacity with a goal of using 70% of household waste. Production data for a 3.5-MW airport solar project are not yet available, and an additional 6 MWof solar capacity is planned for the residential and commercial sectors.

#### How much wind capacity does Aruba need?

Aruba's 30-MW wind project at Vader Piet currently produces 13% of Aruba's load requirements, with an additional 26.4 MWslated to come online in late 2015. WEB Aruba aims to add 3 MW to 6 MWto the biogas plant, with a goal of using 70% of household waste. Therefore, Aruba needs more wind capacity to meet its energy demands.
