

We consider the delivery of solar lighting systems for streets and ways as well as customer specific micro solar solutions as socio-political mission especially in continents without light. This mission is completed with the creation of regional ...

The Semiconductors segment covers semiconductor-based products and solutions, such as LEDs, lasers, sensors, and CMOS ICs with embedded software. It mainly serves OEMs and distributors in the automotive, industrial, medical, and consumer electronics sectors.

Headquartered in Austria and Germany, ams OSRAM has deep engineering expertise and dedicated experts to help you be at the forefront to technology advancement. More about ams OSRAM

As a family-run company, Energy3000 solar stands for reliability and sustainability as well as flexibility and innovation. Since 2007, the "green idea" and the associated solutions for a clean energy future have been carried from Burgenland far beyond the borders of Austria.

As Ecosolar, we are Austria's most reliable provider of solar energy solutions. With our innovative technology, sustainable energy is just a click away. Utilize our highly efficient solar panels to open the doors to eco-friendly energy and reduce your energy costs.

ams OSRAM's activities, focused on light and sensor solutions, are organized into two main business segments, Semiconductors, with the business units Opto Semiconductors (OS) and CMOS Sensors & ASICs (CSA), and Lamps & Systems (L& S) with Automotive and Specialty Lamps. The Semiconductors segment covers semiconductor-based products and solutions, such as LEDs,

Recognizing the potential for terrestrial use, SUNBOOSTER aims to adapt this solar technology for household energy self-sufficiency, targeting homeowners seeking independence from the public power grid. The project involves integrating these space modules into home settings.

PV Styria is an engineering company which engages solely in ethical businesses with focus on renewable, efficient energy solutions, solar energy (PV), energy optimizing, and sustainable agriculture, thus striving to contribute to the well-being of our planetary habitat.

We consider the delivery of solar lighting systems for streets and ways as well as customer specific micro solar solutions as socio-political mission especially in continents without light. This mission is completed with the creation of regional jobs and regional value added.

Our goal is to facilitate the creation of lighting spots that are exceptionally flexible, readily accessible,

environmentally friendly, demand minimal intervention in nature, are insect-neutral, and powered by “free” solar energy.
