A complete power backup system--integrating an inverter, battery, solar panels, and a generator--ensures uninterrupted power supply by combining multiple energy sources. The solar panels provide renewable energy during the day, while the battery stores power for use when sunlight isn't available.

An uninterruptible power supply (UPS), also known as a battery backup, provides backup power when your regular power source fails or voltage drops to an unacceptable level. A UPS allows for the safe, orderly shutdown of a computer and connected equipment. The size and design of a UPS determine how long it will supply power.
