

How to improve electricity coverage in Belize?

Promoting energy efficiency, renewable energy, and regional integration in order to ensure the sustainability of the electricity subsector in Belize. (BEL has begun developing an energy audit team to aid customers in improving their energy efficiency (Interview with Sean Fuller, 2013). Planning is a key activity to increase electricity coverage.

How much energy does Belize have?

Currently, Belize has 54 MW of hydro capacity installed. In terms of biomass, according to BELCOGEN the country has additional bagasse resources that could be used for energy generation purposes (Tillett, 2011). Figure 2 summarizes Belize's energy efficiency and renewable energy potential.

How much does electricity cost in Belize?

Belize's utility rates are approximately \$0.22 per kilowatt-hour (kWh), lower than the Caribbean regional average of \$0.33/kWh because of existing renewable energy projects, but still high compared with U.S. mainland rates.

What are the environmental parameters of Belize?

Environmental parameters. In 2022, Belize's total primary energy supply (TES) was 17,836.6 TJ, of which 36% or 6,425 TJ was produced from renewable energy sources (Figure 3). Belize's renewable energy sources include hydro, biofuels (bagasse and firewood).

What has happened to the energy sector in Belize?

These investments included the construction of the Vaca Dam, which expanded hydroelectric generation capacity and investments on the oilfields. However, since 2008 foreign direct investment in the energy sector (and particularly in the electricity subsector) has plunged (Central Bank of Belize, 2011).

Which energy sources are used in Belize?

in electricity production. In addition to renewables, Belize also employs non-renewable energy sources comprising diesel, fuel oil, and crude oil, with shares of 2%, 19%, and 2.3%, respectively. Diesel demonstrated a minimal increase of 0.4%, while fuel oil and crude oil decreased in share over the 202

Although Belize has local fossil fuel resources, 63 percent of the country's energy supply was imported in 2010, mostly in the form of secondary energy either as refined petroleum products or as electricity.

energy market development in Belize. Because energy expenditures comprise a large portion of the average household's budget, more public awareness of renewable energy and energy efficiency could support a transition to a more diverse and cost-effective energy system that relies on local resources. Solar Potential: <42 MW Potential: <40 MW

o Belize Co-Generation Energy Limited (BELCOGEN) generates electricity burning bagasse and heavy fuel oil using two-(2) 90 ton/hr boilers (high-pressure steam @64bar/480 o C) expanding into 1 x 12.5 MW (back-pressure) and 15 MW (condensing/extraction) turbines

Although Belize has local fossil fuel resources, 63 percent of the country's energy supply was imported in 2010, mostly in the form of secondary energy either as refined petroleum products ...

This document was developed by the National Renewable Energy Laboratory with support provided by the Caribbean Center for Renewable Energy and Energy Efficiency. The information included in this document is for general information purposes only.

This website provides an insight into Belize's energy sector through its policies, projects, publications, and collaborations with national and international stakeholders. We're dedicated to transforming the energy landscape with cutting-edge solutions that drive sustainability and innovation.
