

Does enSights have a Bess calculator?

enSights announced it is launching a new BESS calculator to empower developers and asset owners to fully benefit from the massive energy storage sector by optimizing battery sizing for maximized financial returns based on energy market and grid support opportunities.

What is a Bess calculator & how does it work?

The new BESS calculator uses a proprietary model to balance maximizing returns over the asset lifetime with optimizing battery lifespan by accounting for critical battery specs and degradation parameters, such as depth of discharge (DoD), round-trip efficiency (RTE), and charge and discharge cycles.

Why should you use a Bess battery calculator?

By replacing costly and labor-intensive BESS system design, the calculator instantaneously generates financial projections and recommends ideal battery size and operation modes to introduce economies of scale to battery deployment. Providing decision-making insights, the calculator presents straightforward visualizations of energy and cash flow.

US-based clean energy optimization platform company enSights has launched an AI-powered battery energy storage system (BESS) tool to help developers and asset owners with battery sizing and calculating financial returns ...

EnSights BESS calculator's visualisation of daily interaction between an energy storage system and co-located solar PV. Image: EnSights. Renewable energy portfolio management software company EnSights has launched a tool for calculating the optimal sizing of battery energy storage system (BESS) projects.

The new calculator aims to replace some of the more cost- and labour-intensive BESS design steps that this work represents. EnSights claimed it can generate financial projections instantaneously and recommend the ideal battery size and project operation modes.

**OPTIMAL SIZING CALCULATOR TOOL** Optimal parameterization of a photovoltaic (PV) and a battery energy storage system (BESS) add-on for a consumer. To maximize the contributions while minimizing the price of the installations, the calculator finds the optimal sizes of a PV and a BESS for a site. Those sizes are peak power of the PV system, energy

The enSights BESS calculator generates financial projections and recommends ideal battery size and operation modes in seconds, to introduce economies of scale to battery deployment. The calculator presents straightforward visualizations of energy and cash flow.
