A BESS, like what FusionSolar offers, comprises essential components, including a rechargeable battery, an inverter, and sophisticated control software. The inverter converts electricity from direct current (DC) into alternating current (AC) electricity and vice-versa, facilitating energy storage and later use.

new solar inverters to be used to assist system recovery. If BESS operate on current controlled mode then there is a minimum short circuit requirement of the BESS need to be considered when dispatching diesel generation. Significant RoCoF could occur with single diesel operation (especially contingency is large).

A BESS with a grid-forming inverter can provide black-start capability. First, it establishes the local grid to which the SC is synchronized. The SC then adds fault current capability and voltage and frequency stability as the larger grid is restarted and built up by adding additional power generation and loads.
