

What type of energy is used in Bolivia?

Renewable energy here is the sum of hydropower, wind, solar, geothermal, modern biomass and wave and tidal energy. Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important energy source in lower-income settings. Bolivia: How much of the country's energy comes from nuclear power?

What percentage of Bolivia's electricity comes from fossil fuels?

However, as of 2020, nearly two-thirds of Bolivia's electricity was still being generated from fossil fuels (65%), with an additional 29.3% coming from hydro (down from 31.7% in 2019), 2.5% from solar (up from 1.9%), 0.6% from wind, and 2.6% from other renewable sources.

What is Bolivia's energy mix?

Bolivia's overall energy mix is dominated by fossil fuels, with natural gas (50%) and petroleum products (31%) supplying most of the country's energy in 2020. In 2021, Bolivia's national electricity agency ENDE announced its intention to generate up to 80% of the country's power from renewable sources by 2025.

Is biomass a source of electricity in Bolivia?

Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. Bolivia: How much of the country's electricity comes from nuclear power? Nuclear power - alongside renewables - is a low-carbon source of electricity.
