

ETL is actively exploring Lithium-Ion battery manufacturing in Botswana. The Nano-carbons produced from the refineries will be made use of in this process as opposed to them being ...

Gaborone, Botswana -- Authorities in Botswana are reporting increased thefts of lithium batteries from mobile phone towers amid a surge in global demand for the battery in electric vehicles.

African refiners could outperform global counterparts in various materials: Context Battery cell building blocks--cathode, anode, separator, and electrolyte--each have specific active materials.

CellBlock FCS provides modern solutions for a lithium-powered world. Stored energy is increasingly present in our lives. CellBlock strives to match the speed of emerging technology with engineered products that address safety concerns at every level -- from development to ...

CellBlock FCS helps you mitigate risk when you ship or store lithium-ion batteries or other hazardous materials. CellBlock FCS steel drums represent a best-practice method for transporting used, spent, damaged and prototype batteries.

battery recycling and disposal to mitigate environmental impacts and access climate finance. Governments and development partners could collaborate to assess/leverage existing technologies from other regions. End-of-life batteries can be recycled through repair and reuse, pyrometallurgical recycling, and hydrometallurgical recycling. Recycling ...

ETL is actively exploring Lithium-Ion battery manufacturing in Botswana. The Nano-carbons produced from the refineries will be made use of in this process as opposed to them being exported to external markets.

Three recently granted prospecting licences covering 2,517 km² over the eastern region of the Makgadikgadi Pans in northern Botswana; Main target commodity is lithium hosted in near-surface brines; Lithium brine deposits are accumulations of saline groundwater that are enriched in dissolved lithium that form in a closed-basin system
