

"achieve a good Land Administration System." As part of their commitment, they are implementing an integrated electronic Land Information System ("LIS"). LIS will address Botswana's needs both now and in the future. This paper will explicate the multi-faceted and silo-oriented processes of land management currently utilized within Botswana.

RGA by first obtaining the matrix at $s=0$, this implies the system is at its steady state. From the matrix obtained the inverse was calculated, from the inverse the backward was created and therefore the RGA was calculated by multiplying components of backward by components of the matrix, from RGA the loops that gave minimum interaction were given.
