Saint Lucia: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.

This means 81.9% of the change in the one variable (i.e., British American Tobacco p.l.c.'s stock price (BTI)) is predictable based on the change in the other (i.e., Electricity generation in Saint Lucia) over the 20 years from 2002 through 2021.

developing areas. Energy self-sufficiency has been defined as total primary energy production divided by total primary energy supply. Energy trade includes all commodities in Chapter 27 of the Harmonised System (HS). Capacity utilisation is calculated as annual generation divided by year-end capacity x 8,760h/year. Avoided

Overview of the National Energy Policy (NEP) The NEP for Saint Lucia, covering the period 2023 to 2030, reflects the commitment of the Government of Saint Lucia to strengthen energy security and reduce energy supply costs. Furthermore, the NEP will help the country meet its nationally determined commitment

Saint Lucia's energy landscape presents a clear picture of fossil fuel dependence, with the island consuming over 20.7 million imperial gallons of diesel for electricity generation alone in 2022. The island nation's electricity system, operated by Saint Lucia Electricity Services Limited (LUCELEC), maintains an installed generating capacity ...

This document presents St. Lucia's Energy Report Card (ERC) for 2020. The ERC provides an overview of the energy sector performance in St. Lucia. The ERC also includes energy efficiency, technical assistance, workforce, training, and capacity building information, subject to the availability of data.
