But most people are concerned about how solar panels can power their house and reduce their electricity bill. How Do Solar Panels Work? Here's a step-by-step overview of how home solar power works:

How does home solar power work?

Here's a step-by-step overview of how home solar power works: Excess solar energy is stored in batteries or pushed onto the grid to power local systems (like your neighbor's house!) Now that we've covered the basics, let's break down how solar panels work in more detail. How does solar power work? The photovoltaic effect explained

Is solar power the cheapest way to generate electricity?

If you are looking into options for making your house more eco-friendly and saving some money, solar power is probably one of the most attractive renewable energy options. In fact, solar power is becoming the cheapest way to generate electricity, according to Bloomberg New Energy Finance analysts.

Do solar panels work with a power grid?

Most residential solar systems are designed to work in conjunction with the existing power grid. Grid-tied systems allow you to draw power from the grid when your solar panels aren't producing enough electricity. If your solar panels produce more energy than your home requires, you may even be able to sell excess energy back to the grid.

How do solar panels generate electricity?

This process is constant: Over 500 million tons of hydrogen atoms are converted into helium every second, resulting in photons that generate solar energy here on Earth. In a nutshell, solar panels generate electricity when photons (those particles of sunlight we discussed before) strike solar cells. The process is called the photovoltaic effect.
