

Can the locker cover of Dihao be removed

What should I do if my air locker is misaligned?

Any misalignment of the axle tubes may result in excessive wear and/or failure of your differential and axle shafts. ARB strongly recommends that you have your axle assembly inspected for concentricity and straightness before installing your Air Locker. Remove the wheels, and brakes according to your vehicle manufacturer's service manual.

Can a locked differential be used on icy surfaces?

Continuous operation of a locked differential on high traction surfaces produces unnecessary strain on drivetrain and chassis components while cornering in the vehicle. Caution should be taken when operating locked differentials on slippery terrain, such as icy surfaces.

What happens if a differential is locked?

Caution should be taken when operating locked differentials on slippery terrain, such as icy surfaces. High speeds on slippery surfaces with a differential locked can result in undesirable vehicle behavior or loss of vehicle control. Always operate vehicle with care and reduced speed. How do I maintain my ELocker™ differential?

What happens if air locker is disengaged?

With the Air Locker(s) disengaged, the air source (i.e., compressor) should not have to recharge over time. Intermittent recharging without Air Locker use usually indicates a leak at the solenoid fittings or at the compressor tank O-ring seal.

Do I need a shim for the air locker?

Do not add any shims between the bearings and the bearing seat. Shimming of the Air Locker will be performed with the supplied shim kits and/or the OE master shims (if any) on the outside of the carrier bearings.
