

Can solar panels generate electricity?

Yes, it can- solar power only requires some level of daylight in order to harness the sun's energy. That said, the rate at which solar panels generate electricity does vary depending on the amount of direct sunlight and the quality, size, number and location of panels in use.

Can I install solar panels myself?

You can install solar panels yourself, but doing it alone involves risks. Going solar has significant financial benefits: it reduces your monthly electricity costs and can even increase the value of your home. Incentives can lower your overall cost drastically, but solar is still a big investment.

Should I add a solar energy system to my roof?

You may be considering the option of adding a solar energy system to your home's roof or finding another way to harness the sun's energy. While there's no one-size-fits-all solar solution, here are some resources that can help you figure out what's best for you. Consider these questions before you go solar. See the Spanish version [here](#).

Can solar panels be installed on a roof?

To get the most out of your system, ensure your home can accommodate solar panels before installing them on your roof. Your roof's shading, its orientation and angle towards the sun, and its age all contribute to its potential to generate solar energy. In a perfect world, your panels will face south and tilt between 15 and 40 degrees.

How is solar power generated?

Solar power is generated in two main ways: Solar photovoltaic (PV) uses electronic devices, also called solar cells, to convert sunlight directly into electricity. It is one of the fastest-growing renewable energy technologies and is playing an increasingly important role in the global energy transformation.

Should you use a solar system with a generator backup?

With a PV system in place, you become the master of your own energy destiny. For those seeking additional energy security and resilience, combining solar panels with battery storage or generator backup can be a game-changer. These options ensure that you have a backup power supply during periods of low sunlight or grid outages.
