

How can Canada build a clean and affordable electricity system?

The Government of Canada is proposing to use all the tools at its disposal to support and collaborate with provinces and territories to build clean, affordable, and reliable electricity systems. These efforts can be grouped into four categories: convening and coordination; investment; regulation; and targeted policy. 1. Convening and Coordination

What makes Canada a great energy supplier?

We're also a Tier 1 nuclear nation and a recognized leader in hydrogen and fuel-cell technologies, while wind and solar energy are the fastest-growing sources of electricity in Canada. In short, energy is part of our national DNA. We have what it takes to be a supplier of choice as global demand for clean electricity grows exponentially.

Is Canada a good place to buy clean electricity?

Abundant, affordable, clean electricity is a multi-trillion-dollar market that is fundamental to building a global low-carbon economy. Canada is ideally positioned to lead the way. We already boast one of the cleanest electricity mixes in the world.

Why is reliable electricity important in Canada?

Reliable electricity is vital to the success of Canada's economy and to the health of all Canadians. Canadians require reliable power systems for countless daily needs, from winter warmth to cold refrigerators. The energy transition will only add to this list as new equipment, vehicles and industrial sectors shift from fossil fuels to electricity.

Why is affordable electricity important in Canada?

Affordability is equally important for Canadian industry, where electricity accounts for up to one-third of total operating costs; for businesses, including small and medium-sized enterprises sensitive to rate increases; and for residential customers, particularly lower-income Canadians and other groups most vulnerable to rising costs.

Can Canada achieve 100 per cent affordable electricity by 2035?

Achieving 100 per cent affordable, reliable, emissions-free electricity everywhere in Canada by 2035 is a once-in-a-generation opportunity. Multiple Canadian studies have shown it's possible-- including our own first-in-Canada research. Right now, it's about getting it done.

Our modelling shows that we can have affordable, reliable, 100 per cent emissions-free electricity across Canada by 2035. We can make it happen with renewable sources like wind and solar, combined with energy storage, better transmission, and energy efficiency measures.

Businesses and industries around the world are in pursuit of reliable, affordable clean electricity to power their operations, driven by a marketplace that is increasingly placing a premium on low-carbon goods and ...

The \$4.5 billion Smart Renewables and Electrification Pathways Program (SREPs) supports the deployment of clean electricity infrastructure - such as wind turbines, solar panels, batteries and other technologies - and aims to modernize and strengthen the electricity grid to ensure a reliable, affordable and decarbonized electricity system ...

The installation was done professionally and the area was left clean and tidy. I will definitely recommend Affordable Power Solutions (APS) to my family and friends. See more S. Sandra 7 reviews | Active since Oct 2017. 07 Aug 2022 at 12:32

3 ???· Federal funding for these projects is provided by the Government of Canada's Smart Renewables and Electrification Pathways Program (SREPs). This \$4.5-billion program is designed to support the deployment of grid modernization, energy storage and non-emitting generation in every region of Canada, helping to grow the grid in a sustainable, affordable and ...

Reliable, affordable, 100 per cent emissions-free electricity in Canada by 2035 is entirely possible. Not only that, it would create numerous jobs and help Canada meet its international climate obligations.

Powering Canada's Future combines historic investments and balanced, fair regulations to ensure new electricity production in Canada is built with the affordable, reliable, clean, and renewable energy sources that Canadians expect.

Businesses and industries around the world are in pursuit of reliable, affordable clean electricity to power their operations, driven by a marketplace that is increasingly placing a premium on low-carbon goods and services.
