

What are the main sources of electricity in Canada?

Wind and solar photovoltaic energy are the fastest growing sources of electricity in Canada, while biofuels and electric vehicles also play an important role in reducing the climate impact of transportation. In 2022, Canada produced 639 terawatt hours of electricity.

How much electricity does Canada produce in 2022?

In 2022, Canada produced 639 terawatt hours of electricity. 70% of Canada's electricity comes from renewable sources and 82% from non-greenhouse gas (non-GHG) emitting sources such as solar, hydro, wind and nuclear power. Canada is the world's third largest producer of hydroelectricity. 62% of Canada's electricity comes from hydroelectric sources.

Does Canada have a clean electricity system?

Canada has built one of the cleanest electricity systems in the world with, more than 80 percent of our power coming from non-emitting sources, and we are well positioned to keep leading.

How much electricity does Canada export?

Canada exports about 7% of the electricity it generates to the United States. Transportation GHG emissions increased 4% from 2020 to 2022, though they remain 8% lower than their pre-pandemic level in 2019. In 2023, electric vehicle (EV) registrations made up 10.8% of total vehicle registrations.

Why does Canada import US electricity?

For instance, Canada imports US electricity when hydropower generation is low, such as during droughts. "The trade is important to grid balancing - constantly matching electricity consumption to electricity production -- and helping to shore up electricity supply," the EIA said in a recent report.

Why does Canada want liquefied natural gas?

Canada is offering First Nations along its Pacific Coast billions of dollars in loan guarantees, promises of equity and other financial incentives to encourage gas development on their land. The United States dominates exports of liquefied natural gas, or L.N.G., and Canada wants some of the action.
