

Who is sumec energy?

SUMEC Energy is a global and comprehensive clean energy solution provider. SUMEC Energy is committed to providing customers with one-stop energy solutions including energy supply, energy management, energy conservation and energy storage.

How does Chile benefit from solar energy?

The country benefits from consistently strong winds in mountainous region of Patagonia and some of the world's highest levels of solar radiation in the Atacama Desert. This predictable supply of wind and solar energy has led the Chilean government to estimate that 13% of the world's green hydrogen will be produced within its borders.

Is there an alternative to solar energy in Chile?

Chile has begun to explore an alternative. Both Cerro Dominador and the Alba Project are powered by so-called solar salts, extracted from the Atacama Desert, composed of potassium nitrate and sodium nitrate. When melted and kept in a liquid state, they allow energy to be stored.

Does Chile have a solar thermal tower?

Chile's Atacama desert is home to the only solar thermal tower in Latin America. The imposing 240-meter construction is one of the pillars of the country's ambitious green energy program that began in 2019 and aims to completely replace fossil fuels by 2040.

When did SolarPack start supplying power to Chile?

In March 2020 PV Magazine reported that Solarpack had begun providing power on 2 March 2020, to the Chilean grid from its 123 MW Granja project, 10 months ahead of the contracted date of 1 January 2021. With that, Solarpack raised its total operating capacity in Chile at the time to 181 MW.

Will Chile replace coal plants with solar thermal plants?

As coal plants are eliminated, Chile intends to replace them with solar thermal plants or convert them into batteries like the Alba Project. The solar thermal tower Cerro Dominador has become a symbol of Chile's energy revolution against climate change.

Last December, Chile's centre-right government published the country's first energy transition strategy, which provided targets for achieving net-zero emissions by 2050, including accelerating solar, wind and geothermal energy across the country.

Last December, Chile's centre-right government published the country's first energy transition strategy, which provided targets for achieving net-zero emissions by 2050, including accelerating solar, wind and geothermal

...

Solar power in Chile is an increasingly important source of energy. Total installed photovoltaic (PV) capacity in Chile reached 8.36 GW in 2023. [1] Solar energy provided 19.9% of national electricity generation in Chile in 2023, compared to less than 0.1% in 2013.

The Concentrated Solar Power plant occupies 1,000 hectares and is located in northern Chile's Cerro Dominador. This area has the highest level of solar incidence in the world and is the site...
