

Aggreko has increased its global investment in mobile battery energy storage solutions (BESS) to around \$200m, allowing more industries to access the latest in battery technology as they transition to net zero emissions, add resilience, improve efficiency and overcome power capacity constraints.

A complete mid-node battery energy storage system (BESS) with everything you need included in one container. Our 250 kW/575 kWh battery solutions are used across a wide variety of sectors to increase flexibility, reduce emissions, and control costs.

Aggreko has expanded its global investment in mobile battery energy storage solutions (BESS) to approximately \$200 million, facilitating industries in their transition to net zero emissions, enhancing resilience, ...

Aggreko has increased its global investment in mobile battery energy storage solutions (BESS) to around \$200m, allowing more industries to access the latest in battery technology and reach net zero targets.

Technology group, Wärtsilä;, will supply the Caribbean island of Curaçao with a 25 MW/25 MWh battery energy storage system (BESS). The system will enable the expansion ...

Aggreko has increased its global investment in mobile battery energy storage solutions (BESS) to around US\$200m, allowing more industries to access the latest in battery technology and reach net zero targets.

Technology group, Wärtsilä;, will supply the Caribbean island of Curaçao with a 25 MW/25 MWh battery energy storage system (BESS). The system will enable the expansion of renewable energy capacity and the reduction of carbon emissions, representing an important step towards a sustainable energy future for the island.

Aggreko has expanded its global investment in mobile battery energy storage solutions (BESS) to approximately \$200 million, facilitating industries in their transition to net zero emissions, enhancing resilience, efficiency, and addressing power capacity issues.

AETS is advancing the application of BESS to foster efficient energy usage, integrating these systems with renewable power to mitigate their inherent intermittency. This integration is key to enabling a stable supply of renewable energy and supporting grid connection.
