

What is the progress made in solar power generation by PV technology?

Highlights This paper reviews the progress made in solar power generation by PV technology. Performance of solar PV array is strongly dependent on operating conditions. Manufacturing cost of solar power is still high as compared to conventional power. **Abstract**

Does urban design affect solar power generation potential?

The study demonstrated the significant impact of urban design on PV power generation potential. Izquierdo et al. proposed five criteria for assessing solar potential, namely physical potential, geographical potential, technical potential, economic potential, and social potential.

What is Concentrating Solar Power (CSP)?

Concentrating Solar Power (CSP) is a technology that produces electricity by concentrating direct-beam solar irradiance to heat a liquid, solid or gas which is then used in a downstream process for electricity generation. The majority of the world's electricity today comes from creating a hot fluid, whether generated by coal, gas, nuclear, oil or biomass.

What are the factors limiting the use of solar energy?

The major factors that limit the use of solar energy for various applications is that, it is a cyclic time-dependent energy source. Therefore, solar system requires energy storage to provide energy in the absence of insolation. Comprehensive research and advancement in energy storage technologies offers benefits for solar in energy application.

What is the US DOE Solar Program's technology plan?

The US DOE Solar Program's Technology Plan aims to make PV-generated electricity cost-competitive with market prices in the USA by 2015. Their ambitious energy cost targets for various market sectors are 8 to p in Europe, Japan, and the USA.

How are solar products regulated?

Solar products are regulated through various regulatory frameworks (Rickerson et al., 2009). In addition, fiscal policies and financing mechanisms, such as tax credits, soft loans, and grants, are often employed to support the manufacturing of solar goods and increase consumer demand.
