Today, the construction of smaller-scale hydropower stations is the main focus of North Korea's electric generation sector, and numerous projects are taking place across the country. Based on state media reporting,

the power being generated is largely used in the region around each power station, helping to even out national power differences.

EBG S.r.l. is a company that specialises in the production of resin, air and oil transformers and reactors from 50 kVA up to 10,000 kVA, with insulation class up to 52 kV for the dry type and 145 kV (BIL 650) for oil-insulated transformers.

In this new series, 38 North will look at the current state of North Korea's energy sector, including the country's major hydro and fossil fuel power stations, the state's push for local-scale hydro, the growing use of renewable energy and research and development into new energy sources.
