What is the Current PV energy capacity in Ecuador?

The latest report from the Agency of Electricity Regulation and Control (Agencia de Regulaci3n y Control de Electricidad, ARCONEL) indicates that the current PV energy capacity in Ecuador is 27.63 MW. This number represents approximately 0.32% of the effective power produced by renewable and nonrenewable sources.

Does Ecuador use solar energy?

Despite this substantial solar potential in Ecuador, PV use remains marginal. The latest report from the Agency of Electricity Regulation and Control (Agencia de Regulaci3n y Control de Electricidad, ARCONEL) indicates that the current PV energy capacity in Ecuador is 27.63 MW .

What is the solar market in Ecuador?

The Ecuadorian solar market has been developed in rural areas to supply electricity to isolated areas. Approximately 5000 PV systems have been installed, mainly in the Amazon region; they provide 0.65 GWh/year . In the case of the country's PV energy plants, the capacity ranges between 0.37 MW and 1 MW.

How old are baobabs?

Baobabs reach extraordinarily old ages. Radio-carbon dating has identified many baobabs well over 1,000 years old, with the oldest reaching 2,500 years of age 1. During these life spans, elder baobabs have survived erratic climate conditions, including decadal and centennial droughts and floods.

What happens if a baobab is leafless?

Baobabs are vulnerable to excess water during the dry season (winter) when they are leafless, as leaf transpiration is needed to pump water from the roots 4. Without leaves, baobabs cannot get rid of excess water, resulting in widespread root and stem rot and possibly collapse or death.
