Can solar panels power an electric car?

There are several electric cars with solar panels available today -- some recharge the smaller 12-volt battery that runs your air conditioning, while others can top you up with a few miles of electric range -- but at this time, no commercially available solar panels are capable of fully powering an electric vehicle (EV).

Could solar power be the solution to electric cars?

Some automotive engineers believe solar power may be the solution. The new Fisker Ocean sport utility vehicle will feature a roof-mounted solar panel. Photo courtesy Fisker Inc. Solar panels can increase the distance that electric vehicles can travel. Photo courtesy Hyundai Motor Co.

Can solar energy help plug-in electric vehicles recharge faster?

The integration of solar energy sources would also contribute to battery recharging time reduction, which is a critical issue for plug-in electric vehicles. The considered vehicle integrated photovoltaic systems are inexpensive and commercially available, and the calculation method is straightforward and fast.

How many solar panels do you need to charge an electric vehicle?

According to EnergySage, you will need about seven to 12 solar panels to charge an electric vehicle at home. Given that each panel is roughly 5 by 3 feet, there simply isn't enough solar power being generated -- or real estate on the vehicle for enough panels -- to provide the energy needed to fully power a moving vehicle.

How do you charge an EV with solar energy?

Install a solar thermal system, which uses sunlight to heat water or air and can then heat the EV battery. Connect an EV charger to your home solar installation directly. If you need to charge your vehicle away from home, you can still charge it with solar energy by using a solar-powered public EV charging station.

Are solar-powered cars available?

Several solar-powered cars are currently available, with others on the horizon. Last year, Hyundai Motor Co. unveiled a hybrid version of its popular Sonata sedan that is equipped with a roof-mounted system. It consists of a solar panel and controller that enable the vehicle to generate and store electricity in a battery.
