

Are Hong Kong people happy with less energy?

While people are happy with less energy as long as they can enjoy a high level of energy services, the challenge is that since energy is not valued per se, saving energy has yet to become a widespread social and economic priority. There is still much to be done for Hong Kong people to truly become 'Energy Aware' and 'Energy Wise'.

How can we reduce energy consumption in Hong Kong?

Indeed, everyone can reduce energy consumption by making modest changes to their daily lives. Being 'Energy Aware' and 'Energy Wise' will help Hong Kong become more economically competitive. No less important, it will make Hong Kong an even better city to live, work and raise our families in. I call on everyone to play your part.

What is Hong Kong energy saving policy?

Hong Kong energy saving policy is to drive saving through a combination of educational, social, economic and regulatory means, especially for buildings and inhabitants to become highly energy efficient by 2025. Government leadership and supporting the public to save energy are important priorities.

Why should Hong Kong adopt Zero-Carbon Energy?

Through regulation as well as promotion and public education in energy saving, we can reduce the overall electricity consumption of buildings, and hence lower the cost of adopting new zero-carbon energy. This is conducive to maintaining Hong Kong's overall competitiveness in the global arena, in turn benefitting enterprises and citizens.

How can Hong Kong save energy?

The Hong Kong SAR Government has taken stock of past efforts and charted a path that covers buildings and transportation, the two most important areas in which Hong Kong can do to save energy significantly. We have also detailed the gaps and challenges with a view to engaging the community to discuss on best way forward.

How can CLP help save energy in Hong Kong?

They are in direct contact with electricity users in Hong Kong, which is why they can be very effective educators and customers to save energy. CLP will subsidise the electricity cost of people in need for each kWh of electricity saved by its customers or for every dollar donated by the general public. promoters of energy saving.

What are the main sources of renewable heat in Hong Kong? Share of renewables in energy consumption
Renewables are an increasingly important source of energy as countries seek to reduce their CO2 emissions

and dependence on imported fossil fuels.

Through regulation as well as promotion and public education in energy saving, we can reduce the overall electricity consumption of buildings, and hence lower the cost of adopting new zero-carbon energy. This is conducive to maintaining Hong Kong's overall competitiveness in the global arena, in turn benefitting enterprises and citizens.

Hongkong kann sich zu einem Teil selbst mit Energie versorgen. Die Gesamtproduktion aller Anlagen zur Elektrizitätsgewinnung liegt bei 36 Mrd kWh, also 80% des Eigenbedarfs. Den Rest des benötigten Stroms importiert man aus dem Ausland.

A large portion of Hong Kong's electricity and gas supplies come from non-renewable fossil fuels, such as coal and oil. Burning fossil fuels produces air pollutants and greenhouse gases. By conserving energy and using it more efficiently, we will waste less, pollute less and reduce the impact on an already overstressed environment.
