

Can a fiber optic sensor be used for energy storage?

In theory, for an energy storage station comprising tens of thousands of batteries, a single fiber optic sensor could achieve the effects that would traditionally require tens of thousands of regular sensors. This is highly advantageous for fine battery management.

Can advanced optical fiber sensors be used in batteries?

Advanced optical fiber sensors can be used not only in batteries but also in other energy storage systems, such as sodium-ion batteries, lithium-air batteries, supercapacitors, fuel cells and other new chemical energy sources. Advanced optical fiber sensors have a "milestone" significance on the road to promoting battery intelligence.

Does optical fiber reduce energy storage density?

According to the volume ratio of the optical fiber to PCMs, the energy storage density will decrease by 6.3% here. This decrease could be greatly reduced with thinner fiber. Stability is a fatal factor in the practical application of phase change heat storage.

Why is optical fiber important for solar energy harvesting?

The long-distance light conduction characteristic of optical fiber shortens the heat transfer distance and circumvent the quickly decayed heat diffusion in PCM, which enables the fast solar-thermal energy harvesting in large-scale STES.

Which optical fiber sensor will be the most promising in the future?

FBG sensors integrated into energy storage systems in the future will be as simple and cost-competitive as traditional sensors. Therefore, the FBG, as a representative of small-size, high-stability and multipurpose optical fibers, may be the most promising optical fiber sensor in the future [52,62].

Can optical waveguide enhance solar-thermal energy storage system?

For example, the optical fiber can be coated with heat conducting tube. Thus the heat release of the thermal storage system can be enhanced. In summary, we introduced optical waveguide into solar-thermal energy storage system to enhance the charging rate and solar-thermal energy conversion efficiency.
