

What is a battery energy storage system?

Battery Energy Storage Systems (BESS) are expected to be an integral component of future electric grid solutions. Testing is needed to verify that new BESS products comply with grid standards while delivering the performance expected for utility applications.

What is a GFM functional test system?

Introduces a simple yet effective GFM functional test system that grid planners can use to verify GFM characteristics for newly interconnecting resources. Provides test results of the functional specification and test system using original equipment manufacturer (OEM)-provided models of their GFM and conventional grid following (GFL) BESS controls.

Can battery energy storage systems provide critical grid-stabilizing characteristics?

Outlines unique opportunities for enabling GFM in battery energy storage systems (BESS) to provide critical grid-stabilizing characteristics. Introduces a functional specification specifically for GFM in BPS-connected BESS.

Which energy storage test facility is available in Chalfont PA?

The KEMA's Energy Storage Test Facility provided in Chalfont, PA is capable to handle and test the BESS modules up to 2 MW rated power charge and discharge, as an expected optimum maximum size of a module to date. Table 6 provides basic technical parameters of the test facility offered by KEMA to the industry in Chalfont, PA.

What are functional performance verification tests?

The functional performance verification tests determine whether an interconnecting BESS can be classified as GFM. These tests can be integrated as part of the interconnection study process to establish GFM requirements for newly interconnecting BESS.

Are there standards for integrated battery energy storage systems?

There are standards for photovoltaic system components, wind generation and conventional batteries. However, there are currently no IEEE, UL or IEC standards that yet pertain specifically to this new generation of integrated battery energy storage system products. The framework presented below includes a field commissioning component.
