

Does Ecuador have a natural gas market?

Ecuador's natural gas market is less developed than its oil sector; it has a 0.9% share of total energy production and 1.7% share of energy consumption (Figure 1). Natural gas in Ecuador is mostly used by the industry sector¹.

How is energy used in Ecuador?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

How has Ecuador's energy consumption changed over the years?

Ecuador's energy production increased by a compounded growth rate of 0.5% per year from 2011 to 2021, and renewables accounted for most of the increase. The country's energy consumption also increased by a compounded growth rate of 0.5% per year over the same period, down from 4.9% per year the decade prior.

How much natural gas does Ecuador have?

Ecuador had 385 billion cubic feet (Bcf) of proven natural gas reserves as of 2022. Ecuador's natural gas reserves account for about 0.14% of South America's total reserves. Ecuador's natural gas production is small compared with oil production, accounting for less than 1% of total energy production in the country in 2021.

Is biomass a source of electricity in Ecuador?

Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. Ecuador: How much of the country's electricity comes from nuclear power? Nuclear power - alongside renewables - is a low-carbon source of electricity.

How much electricity does Ecuador use per capita?

Per capita energy consumption is around 0.83 toe, a level 35% below the South American average (2021). Per capita electricity consumption is approximately 1 500 kWh. In its Electricity Master Plan 2018-2027, Ecuador estimated that its power capacity should increase by 4 GW by 2027 to face a 7%/year increase in electricity demand.
