

Entrust Microgrid, formed in 2016, specialises in smart microgrid systems that maximise cost savings from embedded solar PV, heat pumping system, energy storage system, EV charger and other smart energy appliances.

Entrust Microgrid has patented smart microgrid control systems, energy management system and EV charging systems that operate at highest efficiency and lowest operational cost. In addition, we both design and supply smart microgrid solutions, inverters and battery storage solutions. Find our more from the sections and links below.

The project aimed to develop a smart microgrid for the built environment, with a view to convert fluctuated and uncontrollable renewable energy sources to controllable power output, and, to reduce grid connection capacity and cost of embedded renewable power systems and maximise self-consumption of the renewable power generation.

Bespoke smart microgrid design and supply of systems for large commercial and business operations; Domestic smart home microgrids with solar PV, battery storage and hybrid inverters; Innovative EV charging solutions that ...

Bespoke smart microgrid design and supply of systems for large commercial and business operations; Domestic smart home microgrids with solar PV, battery storage and hybrid inverters; Innovative EV charging solutions that simultaneously charge multiple EV"s at 20kW~120kW ideal for EV charging hubs
