What are ESS batteries?

ESS batteries are the foundation fora decarbonized grid. Iron flow technology allows forunlimited cycling with zero capacitydegradation over a 25-year designlife. That enables stacked revenue streams. Long-duration energy storage (LDES) is the linchpin of the energy transition,and ESS batteries are purpose-built to enable decarbonization.

How many large-scale battery storage systems are there in Sweden?

14large-scale battery storage systems (BESS) have come online in Sweden to deploy 211 MW /211 MWh into the region. Developer and optimiser Ingrid Capacity and energy storage owner-operator BW ESS have been working in partnership to deliver 14 large-scale BESS projects throughout Sweden's grid,situated in electricity price areas SE3 and SE4.

Why should you choose ESS batteries?

That enables stacked revenue streams. Long-duration energy storage (LDES) is the linchpin of the energy transition, and ESS batteries are purpose-built to enable decarbonization. As the first commercial manufacturer of iron flow battery technology, ESS is delivering safe, sustainable, and flexible LDES around the world.

How are ESS batteries made?

ESS's long-duration batteries are manufactured using iron,salt and water,and offer customers,safe,low-cost and sustainable energy storage.

When will ESS start deploying long-duration batteries in Europe?

ESS is scheduled to begin European deployment of its long-duration batteries during the second half of 2022. The European region is expected to require up to 20 TWh of long-duration energy storage if it is to meet UN climate change goals of Grid Net-Zero by 2040 1.
