

HDF Energy's Renewstable solution combines a 55 MW solar farm with what the company says is the world's largest renewable energy storage solution, to provide a ground-breaking 140 MWh capacity, based on hydrogen for use in a fuel cell system.

Focused on the electricity system, BloombergNEF's (BNEF's) New Energy Outlook (NEO) combines the expertise of over 65 market and technology specialists in 12 countries to provide a unique view of how the market will evolve. Each year BNEF makes a number of changes to NEO as they strive to improve the completeness and complexity of their ...

This workbook contains full regional and sector data from our New Energy Outlook (NEO) 2019. There is one tab for charts and one for data tables. Selections can be made by choosing sectors and countries from the drop-down lists at the top of these...

Wind and solar energy were described as two significant renewable technologies, with the BNEF NEO predicting that almost 50% of global energy will come from wind and solar power. Renewables as a whole are expected to contribute 62% of the world's energy demands by 2050, with 31% coming from fossil fuels and oil being phased out around ...

The New Energy Outlook (NEO) is BloombergNEF's long-term scenario analysis on the future of the energy economy covering electricity, industry, buildings and transport and the key drivers shaping these sectors until 2050.

This workbook contains full regional and sector data from our New Energy Outlook (NEO) 2019. There is one tab for charts and one for data tables. Selections can be made by choosing sectors and countries from the drop ...

The global energy storage market will grow to a cumulative 1,095GW/2,850GWh by 2040 from 9GW/17GWh in 2018, attracting \$662 billion in investment over this period. Cheaper batteries are enabling usage in more applications, including for energy...

Annual energy storage deployments doubled from 2017 to 2018, and we expect them to nearly double again in 2019. Government support in Korea has created a booming domestic market, but one in danger of being undermined by fire incidents in the...

BNEF's Energy Storage Outlook 2019, published today, predicts a further halving of lithium-ion battery costs per kilowatt-hour by 2030, as demand takes off in two different markets - stationary storage and electric

vehicles.

BNEF's Energy Storage Outlook 2019, published today, predicts a further halving of lithium-ion battery costs per kilowatt-hour by 2030, as demand takes off in two different markets - stationary storage and electric vehicles. The report goes on to model the impact of this on a global electricity system increasingly penetrated by low-cost ...
