What is solar energy & how does it work?

Solar energy can be part of a mixture of renewable energy sources used to meet the need for electricity. Using photovoltaic cells (also called solar cells), solar energy can be converted into electricity. Solar cells produce direct current (DC) electricity and an inverter can be used to change this to alternating current (AC) electricity.

How do solar cells work?

Solar cells are an alternative method for generating electricity directly from sunlight. With this project, you can get down to the atomic level and learn about the world of solid-state electronics as you investigate how solar cells work. Your experiment will measure the effect of changing light intensity on power output from the solar cell.

How can solar energy be converted into electricity?

Using photovoltaic cells (also called solar cells), solar energy can be converted into electricity. Solar cells produce direct current (DC) electricity and an inverter can be used to change this to alternating current (AC) electricity. This electricity can be stored in batteries or other storage mechanisms for use at night.

What are the best solar energy activities for kids?

There are many solar energy activities for kids, so we've split it out into age group. Elementary School Go on an electricity scavenger hunt in your home to find all the places and items that use electricity. Play Power Up!, a game from NASA's Climate Kids program where the goal is to maximize your renewable energy sources to power homes.

What are solar science experiments for kids?

Solar Science Experiments for Kids are a fun way to teach children about renewable energy sources. These experiments are geared for children ages 5-10, but may be adapted for all ages. My daughter is getting VERY excited about her upcoming week at science camp!

Who invented solar energy?

Edmond Becquerel: The story of solar energy began in 1839 when French physicist Becquerel found that when he was experimenting with a cell made of metal electrodes in a conducting solution, the cell produced more electricity when it was exposed to light. This is called the photovoltaic effect.
