

What is the Elsy project?

The ELSY project demonstrates the possibility of designing a competitive and safe fast critical reactor using simple engineered technical features, while fully complying with the Generation IV goal of sustainability and minor actinide (MA) burning capability.

What is an Elsy reactor?

The ELSY reactor is conceived for burning, at least, its self-produced MAs. This happens exactly when the MAs have in the core their equilibrium concentration which must be compatible with the safety requirements.

Is Elsy safe?

Safety has been one of the major focuses all over the ELSY development. In addition to the inherent safety advantages of lead coolant (high boiling point and no exothermic reactions with air or water) a high safety grade of the overall system has been reached.

How much electricity does Greece produce a year?

The production of coal in Greece also fell to a record low of 0.05 exajoules and was not consumed for 28 consecutive days that same year. As of 2022, electricity generation in Greece stood at 53 terawatt hours of electricity, making the country rank 15th in electricity production in Europe.

What type of fuel is used in elsy-600 reactor?

In the ELSY-600 reactor, two fuel types have been considered as candidates, namely the high enriched PuO<sub>2</sub>-UO<sub>2</sub> mixed oxide (MOX) fuel and the nitride fuel (as an advanced option). In the case of MOX fuel, also MAs (Np, Am, Cm) up to 5% with respect to Pu content have been considered.

What is a pool type configuration for the Elsy primary system?

A pool type configuration has been adopted for the ELSY primary system. This concept allows to contain all the primary coolant within the Reactor Vessel, avoiding problems related to the out-of-vessel circulation of the primary coolant (Fig. 5).

For 2024, Greece is ranked 32 of 145 out of the countries considered for the annual GFP review. The nation holds a PwrIndx\* score of 0.4349 (a score of 0.0000 is considered "perfect"). This entry last reviewed on 04/22/2024. \*PwrIndx: Each nation is assessed on individual and collective values processed through an in-house formula to generate its "PwrIndx" (Power ...

Energy in Greece is dominated by fossil gas and oil. Electricity generation is dominated by the one third state owned Public Power Corporation (known mostly by its acronym ???, or in English DEI). In 2009 DEI supplied for 85.6% of all electric energy demand in Greece, while the number fell to 77.3% in 2010. Almost half (48%) of DEI's power output in 2010 was generated using lignite. 1...

The ELSY (European Lead-cooled System) reference design is a 600 MWe pool-type reactor cooled by pure lead. The ELSY project demonstrates the possibility of designing a competitive and safe fast critical reactor using simple engineered technical features, while fully ...

Greece uses type C and F power outlets, which are the same as virtually everywhere else in Europe and Russia. In fact, the only exceptions are the U.K., Ireland, Cyprus, and Malta. For the traveler, this means you can use the same adapter you've been using elsewhere in Europe. The C and F type adapters are interchangeable with each other and are ...
