

Energy Saving Devices, or ESDs, are systems designed to improve the efficiency of the ship propulsion. The most appropriate device or combination of devices will depend on the specific vessel. They must be designed in conjunction with the propeller or propeller-nozzle assembly to achieve the greatest propulsive efficiency.

The Energy for Sustainable Development in the Caribbean (ESD) is aimed at reducing the growth of energy demand in five Caribbean countries (Antigua & Barbuda, Belize, Grenada, St. Lucia, and St. Vincent & Grenadines) through increasing the efficiency of energy use in buildings, increased use of energy conservation and promoting the increased ...

The 2021 Energy Report Card for Grenada provides an overview of energy sector performance and includes energy efficiency, projects, technical assistance, workforce, training and capacity building information, subject to the availability of data.

Salto's Universal Energy Saving Device (ESD) system achieves savings and comfort. Energy usage is one of the highest operating expenses hotels, shared living spaces and the cruise industry incurs. The cost of electricity has risen dramatically in the past few years and will only continue to rise.

The Energy for Sustainable Development in the Caribbean (ESD) is aimed at reducing the growth of energy demand in five Caribbean countries (Antigua & Barbuda, Belize, Grenada, St. Lucia, ...

Grenadians all over the island are making improvements to their homes, properties and small businesses in order to become more climate resilient. This is being made possible through the Enhanced Direct Access Climate Adaptation Revolving Fund at the Grenada Development Bank (GDB), financed by the Green Climate Fund through the Government of ...

Recently, research of Energy Saving Device (ESD) has been developed due to the regulation of the Energy Efficiency Design Index (EEDI). This study deals with performance of combined ESD based on experiments in model scale. Model tests are performed in the towing tank at Pusan National University in Korea to validate its

The RFF project in Grenada aims to support the country's low-carbon energy transition and COVID-19 green recovery effort. The project conducted in 2022 has delivered its products, including an electricity demand profile, an assessment of renewable energy potentials, review of generation plans and costs.

By CROSQ In ESD Project Posted October 21, 2020 THE GEF-UNEP Energy for Sustainable Development (ESD) in Caribbean Buildings Project "The CARICOM Regional Energy Efficiency Building Code (CREEBC), Minimum Energy Performance Standards (MEPS) and Energy Labelling Scheme "
