

Does China's feed-in-tariff subsidy policy improve photovoltaic power generation quality?

Over the past decade, the feed-in-tariff (FIT) subsidy policy of China has driven rapid growth in the photovoltaic power generation (PPG) industry. China now boasts the largest installed capacity of PPG around the world. However, the policy-driven expansion of the PPG industry has not brought about a simultaneous improvement in quality.

What is China's solar power subsidy level?

The subsidy standard is 0.42 yuan/kWh [53,54]. According to the announcement issued by the National Bureau of Statistics in 2018, China's solar power generation in 2017 reached 96.7 billion kWh [55,56]. Therefore, we set the initial subsidy level at $T = 0.4$ yuan/kWh and the target output $Q_t = 96.7$ billion kWh.

How much subsidies are there for PV projects in China?

Following that, the subsidies decreased dramatically from 0.32 yuan/kWh to 0.18 yuan/kWh in the case of household-distributed PV projects) and 0.1 yuan/kWh in the case of centralized PV projects and commercially distributed PV projects.

Do government subsidies improve the innovation efficiency of China's PV industry?

Some scholars have used data envelopment analysis and the Tobit model to analyze the relationship between the development of China's PV industry and government subsidies, and the study shows that government subsidies play an important role in improving the innovation efficiency of China's PV industry (Lin and Luan, 2020).

What is the gap of subsidy in the PV industry?

Statistics reveal that the gap of subsidy in the PV industry reached 60 billion yuan in 2018. If no measures are taken, the subsidies for PV industry may reach 250 billion yuan by 2020. The renewable subsidies in a number of countries show the reduction trends with the increasing years, examples include Germany and the U.S..

Is China a major market for solar photovoltaics?

Provided by the Springer Nature SharedIt content-sharing initiative In recent years, China has become not just a large producer but a major market for solar photovoltaics (PV), increasing interest in solar electricity prices in China.

The authorities' multidimensional approach towards photovoltaics and the stimulative market forces resulted in the increasing role of solar power in the Chinese power generation mix.

????? (photovoltaic generation system), ????(photovoltaic), ?????????????, ?????????????? ...
