

Building a windfarm off Guernsey's coast could reduce bills and make millions of pounds through renewable energy, a report has found. Reports into how solar, tidal and wind energy could...

The Energy Policy 2020-2050 established that the vast majority of Guernsey's energy supplies will come from clean, low carbon sources by 2050 at the latest, local renewable generation will be encouraged and residual emissions will be offset.

- o Renewable electricity is generated off-island and imported to Guernsey via "GJ1" a subsea cable link to France, via Jersey.
- o Heating buildings is the greatest energy demand in Guernsey.
- o The top three energy market segments are heating (non-electricity), electricity and road fuel.

Guernsey's environment committee has recommended the States looks at building an undersea electricity cable to France. It has also recommended the island invests in wind energy and increase the...

Guernsey Electricity's long-term strategy is for an energy system that supports renewables and reduces the reliance on fossil fuels to use the power station for emergency generation only. With the islands "Peak" electricity demand ...

Wind power, solar, tidal, biomass, and heat pumps are among a few technological comprise the renewable energy industry. These technologies may be implemented by small, medium and large companies and projects and instillation may vary on scale and terms of their environment.

To outline the structure of the paper, Section 2 presents a literature review, covering renewable energy applications in microgrids, sustainability benefits of renewable energy microgrids, existing cost studies and international government policies on ...

Guernsey Electricity has installed some of the largest solar arrays in the Channel Islands which feed more than 600kW of renewable electricity into the grid for everyone to use. Guernsey Electricity is committed to providing an affordable and sustainable energy supply, while maintaining a responsible attitude towards the environment.

Guernsey Electricity's long-term strategy is for an energy system that supports renewables and reduces the reliance on fossil fuels to use the power station for emergency generation only. With the islands "Peak" electricity demand expected to reach around 150MW by 2050 - the Electricity Strategy will define how we power businesses, keep ...
