

# Have low-priced photovoltaic panel stocks reached their daily limit

Why are photovoltaic module prices falling?

One reason for this is the "PV module glut" in warehouses in Europe, according to pvXchange's Martin Schachinger. We have all been asking ourselves for some time now: How far can photovoltaic module prices go down before the bottom is finally reached? Apparently, there is still room for further drops, as all prices have fallen again this month.

Are photovoltaic panel prices falling?

Never before in the history of photovoltaics have panel prices plummeted so significantly in such a short space of time. For a month or two now, the values have been below the previous all-time low of 2020 and even more so below the production costs of most manufacturers.

What happened to PV & PPA prices?

U.S. PV system and PPA prices have been flat or increased over the past 2 years. Global polysilicon spot prices fell 18% from mid-October (\$10.53/kg) to mid-January (\$8.70/kg), approaching their lowest levels of the past several years. Global module prices reached yet another record low, falling 22% between mid-October and mid-January to \$0.11/Wdc.

Why have solar module prices fallen so sharply?

Solar module prices have never fallen so sharply in such a short period of time. One reason for this is the "PV module glut" in warehouses in Europe, according to pvXchange's Martin Schachinger. We have all been asking ourselves for some time now: How far can photovoltaic module prices go down before the bottom is finally reached?

Why are photovoltaic prices dropping so much?

The wave of devaluation is also just beginning, which is why the price drop is becoming more severe from month to month. Many still hope to get away with a black eye. But the risk of being stuck with the old goods is very high. Those interested in photovoltaics also monitor prices very closely and compare offers.

Why is the photovoltaics industry not surviving the summer slump?

The fact that interest rates on loans continue to rise doesn't make the decision any easier. The consequence of all the factors listed is a collapse in demand so that the photovoltaics industry has not yet emerged from the summer slump even in mid-September.

Most south-facing roofs do not have photovoltaic panels, and of those that do, most have only small installations of around 5-6 kWp (author's calculation from [48]; see also ...

Summary statistics of limit hits in the whole period (Panel A), in the bullish periods (Panel B), and in the
