

What is Holcomb energy systems?

Holcomb Energy Systems is setting a new industry standard in electric power generation. Our core technology, the Holcomb Energy System (HES), is an entirely new source of energy -- using no fuel and putting out zero emissions, it is scalable, silent, and point of use.

Where can the Holcomb energy system be deployed?

The Holcomb Energy System can be deployed in areas where no electrical grid infrastructure exists. One in five people worldwide are living with no electricity and millions more have just intermittent access. We can make rural electrification accessible, affordable and 100% clean.

Why was Holcomb energy systems showcased at the new energy technology conference?

Thrilled to have virtually showcased Holcomb Energy Systems at the New Energy Technology conference in Zurich, Switzerland. With over 300 participants gathered at the auditorium, it was an honor for us to share our innovation on such a significant platform.

By removing the gas or coal-fired dynamo and replacing it with the solid-state Holcomb Energy System, we eliminate the need for coal, natural gas or any fuel, turning every power plant 100% clean, self-sustaining and emissions free.

When fully deployed, the Holcomb Energy System technologies offer a sweeping answer to the most pressing problems facing our world - pollution, climate change and wars for fossil fuels - as a cleaner, safer, more just and equitable ...

This scalable technology has applications everywhere energy is used -- in homes, commercial buildings, transportation, consumer electronics, and on or off the electrical ...
