

What type of energy is used in Honduras?

Solar photovoltaic (PV) energy followed at 18.9%, with wind power at 12.9%, and geothermal energy at 5.8%. Due to the diversity of the Honduran landscape, the potential for wind development varies considerably. A 100 MW wind project was built in 2012.

What is Honduras' energy mix?

In 2021, Honduras' energy mix was led by oil, constituting 52.3% of the total energy supply, followed by biofuels and waste at 33.7%. Modern renewables, which exclude traditional biomass practices like burning wood or agricultural residues, accounted for 13.7%, while coal made up just 0.3%.

Does Honduras use biomass?

Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important energy source in lower-income settings. Honduras: How much of the country's energy comes from nuclear power?

Does Honduras have solar power?

Honduras has a large potential for solar photovoltaic generation. In fact, it is a practical solution for servicing energy-isolated rural communities. In 2007, there were about 5,000 individual Solar Home Systems, with an average size between 30 Wp and 50 Wp, which makes up for a total capacity of approximately 15 to 25 kW of power.

Does Honduras need a 'energy Emergencia'?

Access to electricity in rural areas needs to be improved. In June 2007, the president of Honduras, Manuel Zelaya, declared an "energia emergencia". An Intervention Board (Junta Interventoria), headed by the Minister of Defence and the Minister of Finance, was temporarily put in charge of ENEE to address the crisis.

Does Honduras need a new infrastructure?

However, national renewable energy and sustainable development ambitions in Honduras face important infrastructure constraints. For example, significant investment is needed to enhance the quality of energy and water services, including improvements in coverage and connectivity.

Honduras: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across ...

Honduras is a regional leader in solar energy, with roughly 11% of electricity provided by photovoltaics in 2018 and 2019. As of 2016, the country ranked first in Central America for installed solar capacity and third in

Latin America behind Chile and Mexico. Honduras aims for 80% of its energy matrix to be from renewables by 2038.

In its Energy Roadmap 2050 and National Plan 2010-2022, Honduras has set a target to achieve an 80% share of renewable energy in the country's total electricity generation by 2038, up from the current 60%. However, national renewable energy and sustainable development ambitions in Honduras face important infrastructure constraints.

3 ???&#0183; Honduras's coup-era government opened the floodgates for predatory energy projects. Now that Hondurans are fighting back, the companies are trying to take them to arbitration. By Marcia Perdomo | December 12, 2024 The impoverished country of Honduras pays some of the highest electricity prices in Latin America, which adds to the high cost of ...

Honduras has a very large potential to develop energy efficiency programs. Large improvements could be made in the areas of air conditioning for both the residential and commercial sectors, where the implementation of measures in the area of demand management and the rational use of energy could prevent unplanned blackouts. Some progress has been made recently under the Generaci&#243;n Aut&#243;noma y Uso Racional de En...

The solar networks, each with a generating capacity of up to 25.6 MWp (Megawatt peak), were built in the south of the country. This will, in turn, assist Honduras in its efforts to diversify its energy mix and and reduce its reliance on fossil fuels. Scroll top
