What is the solar photovoltaics supply chain review?

The Solar Photovoltaics Supply Chain Review explores the global solar photovoltaics (PV) supply chain and opportunities for developing U.S. manufacturing capacity.

What is the supply chain for solar PV?

The supply chain for solar PV has two branches in the United States: crystalline silicon(c-Si) PV, which made up 84% of the U.S. market in 2020, and cadmium telluride (CdTe) thin film PV, which made up the remaining 16%. The supply chain for c-Si PV starts with the refining of high-purity polysilicon.

What is the IEA photovoltaic power systems programme?

The IEA Photovoltaic Power Systems Programme (IEA PVPS) is one of the TCPs within the IEA and was established in 1993. The mission of the programme is to "enhance the international collaborative efforts which facilitate the role of photovoltaic solar energy as a cornerstone in the transition to sustainable energy systems."

What is a snapshot of global PV markets?

This 11th edition of the "Snapshot of Global PV Markets" aims at providing preliminary information on how the PV market developed in 2022. The 28th edition of the PVPS complete "Trends in Photovoltaic Applications" report will be published in Q4 2023.

Is solar now a mainstream energy source?

With the hindsight of the past three years, clearly solar is now a mainstream energy source. In 2022, solar PV generated approximately 50% of the total renewable electricity production from new production assets despite being two thirds of new capacity.

Why is PV Manufacturing important?

Developing U.S. PV manufacturing could mitigate global supply chain challenges and lead to tremendous benefits for the climate as well as for U.S. workers, employers, and the economy.
