

How to connect the electric meter to the solar panel

How do I connect solar panels to the grid?

To connect solar panels to the grid, you need to install a bi-directional meter on your home. This allows energy produced by your solar panels to be fed into the grid when you're not using it, and for you to draw energy back from the grid when you need it.

How does a utility meter connect to a solar panel?

There is an ALTERNATIVE UTILITY CONNECTION called a "Supply or Line Side" connection. This connection is made BEFORE the main breaker. A junction box is added between the utility meter and the main service panel. Then the wires from the utility meter, the main breaker panel, and the PV solar are connected in the junction box.

Do you need a solar power meter?

Other power companies have two separate meters to measure the separate flows of energy in and out of your home. Either way, you'll need to connect the power to the meters to reap those benefits. Connect your solar power panels to your home electricity to start rolling back the electric meter and saving on energy.

How does a solar meter work?

Some electrical companies provide a single meter to monitor the electricity you produce and send to the grid, along with the electricity you pull off the grid when you run short from your own solar energy production. Other power companies have two separate meters to measure the separate flows of energy in and out of your home.

How do you connect a solar inverter to a utility meter?

A junction box is added between the utility meter and the main service panel. Then the wires from the utility meter, the main breaker panel, and the PV solar are connected in the junction box. An adequately sized PV service disconnect box must be used prior to making the connection between the junction box and the solar inverter.

How do you connect solar panels to a power inverter?

Connect the solar panels to the inverter to do this task. Depending on your system, you'll either connect directly to the power inverter and then into the home system or connect solar panels to the inverter, the batteries, and the home system. If using them, the next step is to connect the battery to both the inverter and the circuit breaker.
