

How to deal with rotten photovoltaic panels

What should I do if my solar panel is damaged?

When dealing with broken or damaged solar panels, it is crucial to assess the extent of the damage before proceeding with any repairs or replacements. This process comprehensively evaluates the panel's physical condition and electrical performance. Begin by conducting a meticulous visual inspection of the solar panel.

Can a professional replace a damaged solar panel?

Individual solar cells can be replaced by a professional, lengthening the life of your panel overall. This is helpful if microcracking affects a few of your solar cells. Our customers don't have to worry about the cost or hassle of repairing or replacing a damaged solar panel at all.

What happens if a solar panel inverter is damaged?

Damage to the inverter or other electrical components can impact the overall functionality of the solar panel system. In such cases, consulting with a qualified electrician or solar professional is crucial to evaluate and repair the damaged components.

Why do solar panels not look damaged by impact?

If energy production is down but solar panels don't look damaged by impact, the problem is most likely within the solar cells themselves. Solar panels are made up of tiny cells that are, in turn, composed of tiny "wafers" made of silicon. Each wafer is under 200 microns thick.

What should I do with salvaged solar panels?

Ensure that the salvaged panel is compatible with the off-grid system, and consult with a solar professional to design an appropriate system layout that maximizes the use of the salvaged panel's output. Consider donating or reselling still functional panels to others in need.

What happens if a solar panel backsheet fails?

The main cause for solar panel degradation due to back-sheet failure is the delamination of the backsheet or the formation of cracks in the material. When the backsheet fails, the inner components of solar panels are exposed to external agents, and the lifespan of PV modules is reduced.
