

How to disassemble the generator of the European version of Fengjun 5

How do I know if my Stamford generator is genuine?

Genuine parts may be recognised by the STAMFORD name. We recommend the following for Service and Maintenance. In critical applications a set of these service spares should be held with the generator. When ordering parts the machine serial number or machine identity number and type should be quoted, together with the part description.

How do you keep a generator from exploding?

To reduce the possibility of fire or explosion, be careful when working around gasoline. Keep cigarettes, sparks and flames away from all fuel-related parts. Rotor or Engine only Removal: When removing the rotor only, it is usually much faster to remove the engine from the generator chassis.

What is a Stamford generator manual?

The manual is written for skilled electrical and mechanical technicians and engineers, who have prior knowledge and experience of generating equipment of this type. We offer a range of training courses that cover all aspects of STAMFORD generators. Applications, I = Industrial, M = Marine.

How do you remove a transformer from a generator?

Stop the generator. Remove transformer cover box. (Normally left hand side of the terminal box when viewed from the non-drive end). Slacken the three transformer mounting bolts along the top of the transformer, and the two bolts holding the mounting bracket to the base plate.

How do you remove rust from a generator spigot?

For transit and storage purposes the generator frame spigot and rotor coupling plates have been coated with a rust preventative. This MUST BE removed before assembly to engine. A practical method for removal of this coating is to clean the mating surface areas with a de-greasing agent based on a petroleum solvent.

How to check generator windings & diode Assembly & AVR?

Follow the SEPARATE EXCITATION PROCEDURE to check generator windings, rotating diodes and AVR. The generator windings, diode assembly and AVR can be checked using this procedure. With the generating set stationary remove AVR access cover and leads F1 and F2 from the AVR.
